

ABSTRACT OF DISCLOSURE

A display apparatus comprises a monitor on which pictures are displayed, brackets installed on the monitor and having slits on opposite sides of each bracket, spring brackets combined to the brackets and having locking members inserting into the brackets through the slits and stands selectively inserted into the brackets and locked in the locking members of the spring brackets. The present invention provides a display apparatus that can maintain a consistent connection between the monitor and the stands from frequent locking and unlocking and keeps the control point accurate.
